**FORWARD**SIM  
simulations & technologies

# API

Federated capability for your simulations

## Efficient **Interoperability**

The DSim API is a concise distributed simulation programming interface supporting C, C++, FORTRAN, C# and JAVA loaded with exclusive features. Make your simulations HLA & DIS compliant in no time and deploy them royalty free.

Access the DSim API directly from your code and use it to build HLA & DIS extensions for your simulations.

## Save on development time

DSim API will cut your application development time by 75% with its small foot print and ready to use skinnable graphical user interfaces.

## No learning curve

The distributed simulation standard implementation details have been taking away from the equation.

## End-user flexibility

End-users have all the flexibility they are looking for when connecting with other simulations with your products.

## Royalty free deployment

Licensed as a development tool, it is the most cost effective solution for your COTS products.
